Agentic Development Workflow

Design, Review and QA

Nyasha (Nash) Nziramasanga

01 · Plan

Obsidian

Codex writes, Claude
Code reviews,
Codex builds

02 · Design

Pen.dev

Web screens become
mobile designs

03 · Review

Linear

PRs reviewed where the
work is tracked

04 · QA

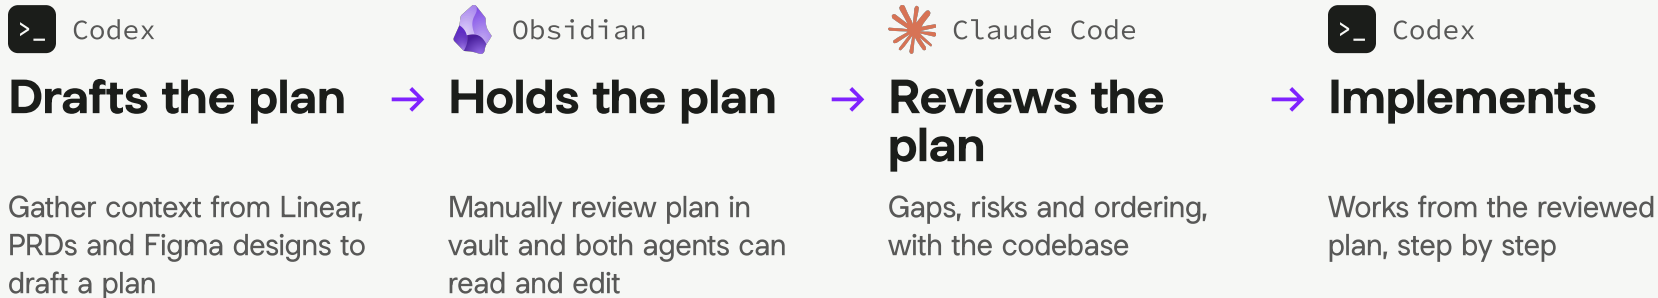

Claude Code + Simulator

Agent drives the app
before release

Planning Loop

01 · Plan

A second model catches what the first one is confident about.

Design Engineering

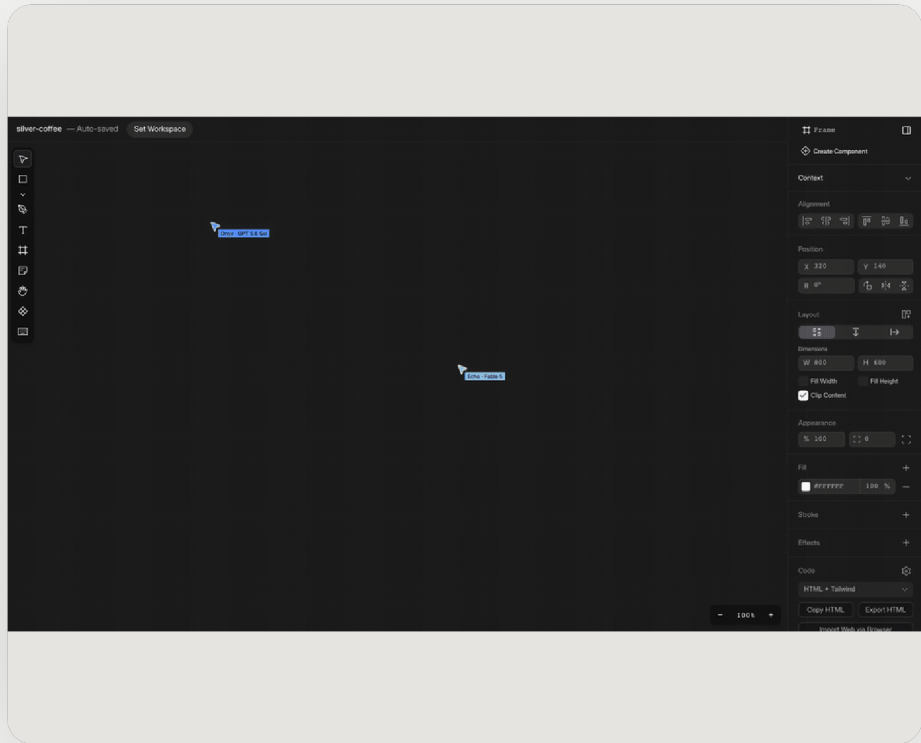

02 · Design

Pen.dev turns a shipped web screen into mobile app designs.

- 1 Point it at the web page
- 2 Describe platform constraints
- 3 Iterate, then export

When I reach for it

A feature ships on web first and mobile has no design yet.

PR Review in Linear

03 · Review

Before

Three tabs, three tools

Context rebuilt every review

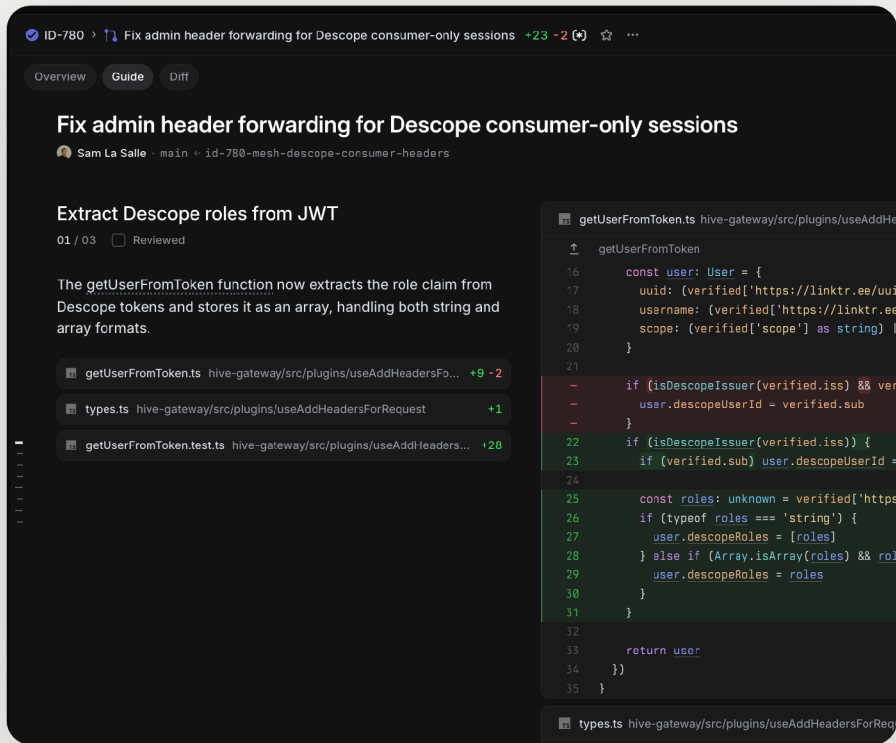

Criteria checked from memory

With Linear

One screen

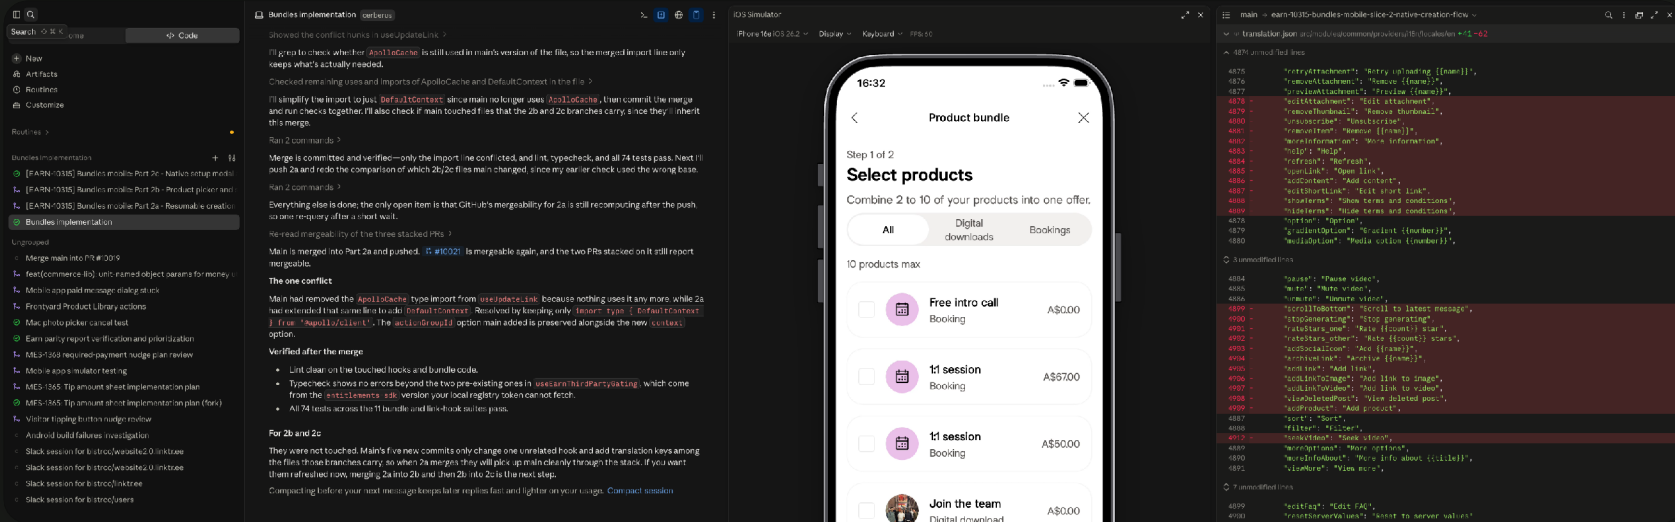

Agent summarises the diff

Human merges

QA, Fix and Ship with Claude Code

04 • QA

01 • QA

Drive the Simulator

Taps through the release checklist and reports every issue it sees

02 • Fix

Fix what it finds

Picks up its own findings and reported bugs, with the app in front of it

03 • Implement

Build from the plan

Same session: code, diff and app on one screen

Notable Mentions

Outside the loop

Dictation

Fluid Voice

Talking is faster than typing for prompts, plans and PR comments.

- Runs on device — nothing sent to the cloud
- Choose your own voice model
- Highly customisable

Cloud agents

Scheduled scans with Devin

Tried Claude Code automations, Cursor automations and Codex scheduled tasks. Devin is the current favourite.

Mobile / web parity scan	weekly
Security scan	weekly
Dead code scan	monthly

One Loop, Four Seats

Agents do the drafting, reviewing and tapping.
Engineers make the calls. Pick the stage that hurts
most and try one thing this sprint.

01 · Plan

Obsidian + Codex + Claude Code

Codex drafts, Claude Code reviews, Codex implements. One vault as shared memory.

Start here

Have a second model review your next plan before you build it.

02 · Design

Pen.dev

A shipped web screen becomes a mobile design engineers can build from.

Start here

Run one web screen through Pen.dev.

03 · Review

Linear

One screen. The agent summarises; a human merges.

Start here

Review your next PR from the Linear issue.

04 · QA

Claude Code + Simulator

The agent taps through the release checklist and reports back.

Start here

Let Claude Code run one release flow in the Simulator.
